SECURE ACCESS CONTROL

Metal Detectors

Visa Premier HANDHELD Metal Detector

Reliable deep sensitivity and needs no adjusting. *VISA Premier* detects ferrous, non-ferrous and stainless steel objects with quick response time. The unique LED indicator with its 10 light emitting diode detection panel, shows the size of the metal object, ranging from Green (Low), Yellow (Medium) to Red (High), and in more detail by the number of lights. Optional rechargeable function with 9V NiCad/NiMh batteries and Battery Condition Indicator shows battery status. The *VISA Premier* is completely safe for both operators and subjects by operating at very low power and frequency, even involving pregnancies or medical electronic devices like heart pacemakers.

Passport HANDHELD Metal Detector

Detects even the smallest objects while constantly and automatically re-tuning itself, never requiring any adjustments. *Passport's* operation is completely automatic, using Audio and LED indicators to announce the presence of a metallic object. Also it has 15 level detection indicator signal lights, showing the size of the metallic objects from green to yellow to red colours, and more detail by number of lights. *Passport* detects all conductive metals including ferrous, non-ferrous and stainless steel. *Passport* operates in a very low frequency range and is therefore completely safe for both operators and subjects in all scanning operations.

WALK THROUGH Metal Detectors

Fixed or modular units - various models available.
